

BLU Energies: Deepwater Frontier

A Pure-play West Africa
Deepwater Oil & Gas Explorer

November 2025.

Introducing BluEnergies

A New Force in Deepwater Oil & Gas Exploration

We are pleased to introduce BluEnergies Ltd., an emerging exploration company redefining opportunity in the global energy landscape.

Headquartered in Canada and listed on the TSX Venture Exchange (TSXV: BLU), BluEnergies is a pure-play deepwater oil and gas explorer with a strategic focus on West Africa's Harper Basin, Offshore Liberia.

Holding 100% working interest across 8,924 km² of deepwater acreage and backed by 6,167 km² of advanced 3D seismic data, BluEnergies is positioned at the frontier of one of the world's most promising hydrocarbon provinces — the Cretaceous Deep-Water Fan System.

As the global energy sector pivots back to deepwater exploration, BluEnergies stands ready to lead the next wave of growth, driving both value creation and energy security through responsible, high-impact exploration.

01 | Opening

BluEnergies in One Glance

Company Overview

BluEnergies is a TSXV-listed company, specializing as a pure-play explorer in West Africa's deep-water oil & gas sector. The company holds a 100% interest in an expansive 8,924 km² offshore Liberia Cretaceous fan play, positioning itself at the forefront of emerging opportunities in this region.

Analogous Fields

BluEnergies' exploration strategy is bolstered by the analogy to Total's Venus Field, offshore Namibia, a significant discovery that validates the geological potential of the region. This comparison underscores the company's potential for substantial discoveries.

01

02

03

04

Seismic Data

The company has secured rights to 6,167 km² of 3D seismic data, a critical asset that enhances exploration accuracy and efficiency. This extensive seismic coverage provides a detailed subsurface map, crucial for identifying high-potential drilling targets.

Management Expertise

The company's management team brings a wealth of experience, with a track record of multi-basin discoveries. This expertise is crucial in navigating the complexities of new basin exploration and maximizing shareholder value.

Why Deepwater Cretaceous Fans

Industry Shift

The oil & gas industry is experiencing a significant pivot back to offshore exploration, driven by the realization that over 50% of new oil & gas fields will be offshore, with approximately 70% of these located in deep water. This trend highlights the strategic importance of deep-water assets.

High Success Rate

Cretaceous fans have demonstrated a remarkable technical exploration success rate of over 50%* making them highly sought after globally. This high success rate is attributed to advanced technological capabilities and the presence of multi-billion-barrel discoveries like Venus, Graff, and Mopane.

Global Validation

The global validation of Cretaceous fans as a premier play type is evident from major discoveries. These successes have sparked an exploration boom, with companies increasingly focusing on deep-water regions to capitalize on their vast potential.

02 | Asset Core

Who We Are Today

Enterprise Outline

BluEnergies Ltd. is a publicly traded Canadian Oil & Gas company dedicated to generating value and opportunities for all stakeholders through disciplined and responsible investments in the African Oil & Gas sector. We maintain an unwavering focus on safety, the communities we serve, and environmental stewardship.

Operational Commitment

The company is committed to responsibly developing its assets while adhering to ethical practices, the rule of law, and international best standards, ensuring a transparent and sustainable investment environment.

Category	Details	Notes / Source
Licence	Reconnaissance Licence (RL-002)	Corporate Presentation, Oct 2025
Blocks	LB-26, LB-30, LB-31	Located in Harper Basin
Ownership	100% Working Interest (WI)	BluEnergies Ltd.
Location	Harper Basin, Offshore Liberia	West Africa Transform Margin
Total Acreage	8,924 km ² (~2.2 million acres)	~40% of Harper Basin
3D Seismic Coverage	6,167 km ²	TGS multi-client data
Water Depth Range	2,200 – 3,300 m	Deep-water environment
Geological Setting	Cretaceous Deep-Water Fan Systems	Seven fans identified: Thea–Jupiter
Reservoir Quality	Amplitude-supported, sand-rich fans	High net pay potential
Work Program Commitment	US\$ 1.6 million	Seismic interpretation & basin modeling
Licence Term	2.5 years (to March 5, 2026)	Extendable by 1 year
Proximity to Shore	~50 km offshore	Monrovia / Buchanan logistical access
Adjacent Operators	TotalEnergies (4 blocks acquired Sept 2025)	Validation of Harper Basin potential

3D Seismic Coverage

Seismic Data Licence

BluEnergies holds an exclusive licence to 6,167 km² of TGS multi-client 3D seismic data. This extensive coverage is a critical asset for mapping prospects and identifying high-potential drilling targets.

Technical Advantages

The 3D seismic data fast-tracks the mapping of prospects, revealing seven distinct fan systems. This detailed imaging supports the creation of a high-quality, drill-ready inventory.

Amplitude Support

The seismic data is amplitude-supported, indicating strong reservoir potential. This supports the identification of multiple targets that can be tested with a single well, optimizing exploration efficiency.

03 | Geology

▶ The Harper Basin is Offshore West Africa's Final Frontier

The Harper Basin represents one of the last unexplored deep-water basins along the South Atlantic transform margin, extending offshore from Liberia.

Untested yet surrounded by major discoveries —Jubilee (Ghana), Baleine (Côte d'Ivoire), and Venus (Namibia)—it lies on the same Cretaceous fan fairway that has yielded multi-billion-barrel successes across West Africa.

With BluEnergies controlling 40% of the basin's offshore acreage and possessing extensive 3D seismic coverage, Harper Basin stands as the final one of the last basins capable of delivering the next world-class deep-water discovery in the region.

Large-Scale Deep Water Cretaceous Fan Play

BluEnergies holds a 100% working interest in Reconnaissance Licence Blocks 26, 30, and 31, covering approximately 40% of the Harper Basin. The licence has a 2.5-year primary term, extendable by one year.

The acreage hosts seven deep-water Cretaceous fan systems, offering repeatable exploration opportunities within a proven transform-margin basin. This large-scale geological setting supports significant hydrocarbon potential and efficient resource delineation.

The play provides short cycle times from discovery to first oil, enhancing project economics. Multiple targets can be tested with one well, optimizing exploration efficiency and reducing operational costs.

04 | Logistics & Metocean

Benign & Secure Operating Environment

The Harper Basin offers a benign, secure, and logistically accessible environment for offshore operations, featuring calm metocean conditions, stable currents, and safe subsea characteristics ideal for deep-water exploration.

Offshore Operations

- Located ~50 km from shore, ensuring easy logistical access
- Shore base: NOCAL's planned facility in Buchanan, Liberia (~300 km)
- Crew changes via Monrovia, the Liberian capital
- Guinea Current: steady at 1–2 knots
- Wave height: moderate, averaging 0.5–2 m
- No fishing activity or environmentally protected zones, simplifying operations

Subsea Conditions

- Water depth: 2,200–3,300 m across well sites
- Planned well total depth (TD): 5,500–6,000 m bmsl
- Seafloor: generally flat, with localized canyons
- Reservoirs: expected to be normally pressured clastic formations, reducing drilling risk

05 | Analogues

Venus Field Comparison

Venus Field – Namibia

- **Operator:** TotalEnergies
- **Discovery Year:** 2022
- **Recoverable Resources:** ~ 4 + billion boe
- **Play Type:** Cretaceous deep-water fan (Turonian)
- **Relevance:** BluEnergies' Harper Basin fans share the same depositional system and seismic amplitude character as Venus, confirming large-scale reservoir potential on the transform margin.

Baleine – Côte d'Ivoire

- **Operator:** ENI
- **Discovery Year:** 2021
- **In-Place Volumes:** ~ 1 – 1.5 billion barrels oil + associated gas
- **Play Type:** Cretaceous deep-water turbidite fan
- **Relevance:** Validates the hydrocarbon-charging efficiency of the Upper Cretaceous marine source system shared with Liberia's Harper Basin.

Jubilee – Ghana

- **Operator:** Tullow / Kosmos
- **Discovery Year:** 2007
- **2P Reserves:** ~ 0.8 billion barrels oil
- **Play Type:** Cretaceous fan-channel complex
- **Relevance:** Demonstrates commercial viability and repeatability of Cretaceous deep-water fan plays along West Africa's transform trend.

Liza Trend – Guyana (Conjugate Margin)

- **Operator:** ExxonMobil / Hess / CNOOC
- **Discovery Year:** 2015
- **Recoverable Resources:** > 10 billion boe
- **Play Type:** Cretaceous fan-channel system
- **Relevance:** Confirms that conjugate South Atlantic margin plays yield multi-billion-barrel potential, directly analogous to Harper Basin's geologic evolution.

Liberia: A Constitutional Democracy with a Growing Economy

Liberia offers a stable, investor-friendly environment supported by democratic governance, steady economic growth, and active participation in international development and regional energy cooperation.

Political Stability & Governance

- English-speaking constitutional democracy modeled after the U.S. system
- Three branches of government with a bicameral legislature
- New administration (2024) elected for a six-year term
- Member of the UN, World Bank, IMF, and UN Security Council
- Party to the Nigeria–Morocco Gas Pipeline Project, promoting regional cooperation

Economic Growth & Demographics

- Population: approximately 5.6 million
- 2024 GDP: US \$ 4.7 billion, growing at ~5 % annually
- Stable macroeconomic environment supporting energy investment and infrastructure expansion
- Attractive investment climate backed by transparency and international engagement

05 | Commercial Edge

Why a Reconnaissance License?

Cost-Effective Exploration Framework

The Reconnaissance License structure offers a significantly lower-cost alternative to Phase 1 of a Production Sharing Contract (PSC). It eliminates signing bonuses, fund contributions, and surface rentals, while also reducing the cost of 3D seismic acquisition. This streamlined framework allows BluEnergies to advance technical understanding and prospect definition efficiently, conserving capital during early exploration.

Strategic Flexibility and Simplified Entry

This license type mitigates new-country-entry challenges, enabling BluEnergies to conduct the same technical work typically required under Phase 1 of a PSC without the associated fiscal and regulatory obligations. The approach preserves strategic flexibility, accelerates decision-making, and positions the company to progress seamlessly toward future PSC negotiations or farm-in partnerships once targets are fully defined.

Operating Environment

Political Stability

Liberia's stable constitutional democracy, modeled after the U.S., provides a secure operating environment. The country's English-speaking governance and adherence to international best practices support foreign investment.

Economic Growth

Liberia's 2024 GDP of \$4.7 billion is growing at approximately 5% per annum. This economic stability, combined with the new administration's commitment to transparency, enhances investment appeal.

International Engagement

Liberia's membership in international organizations such as the IMF, World Bank, and UN Security Council underscores its commitment to global cooperation. This engagement supports a favorable investment climate.

06 | Leadership

Board & Management

Craig Steinke CEO & Director

Mr. Steinke, with global oil and gas leadership experience, founded BluEnergies in 2021 and guided its technology-driven growth and 2025 public listing through private funding.

Cyrus Driver – Director & Audit Committee Chair

Chartered Accountant with 30+ years' experience, former partner at Davidson & Company, and CFO/Director of multiple TSX Venture-listed resource firms.

Carol Law - Director

With 40 years in petroleum exploration, he led global teams across 50+ countries with Amoco, BP, Kerr McGee, and Anadarko, discovering Mozambique's major Rovuma Basin gas field.

Don Crossley - Director

With 35+ years in public companies as Director, CEO, and CFO, Don holds a Commerce degree from UBC, a CPA designation, and continues advising resource firms in semi-retirement.

Board & Management

Vivien Chuang, CFO

CPA with 15+ years in the resource and mining sector, serving as CFO, director, and audit chair on TSXV and CSE companies, specializing in finance, budgeting, and risk management.

Michelle Borthwick, Corporate Secretary

Corporate finance and governance professional with 25+ years in senior executive roles, specializing in M&A, capital markets, and public company governance, administration, and reporting compliance.

Sergio Laura, VP Exploration

Geologist with 40+ years in global hydrocarbon exploration with Eni, leading major discoveries including Baleine, and serving as Sub-Saharan Africa VP, advisor, and board member; geology degree from Genoa University.

Share Structure

Item	Data	Notes / Source
Exchange	TSX Venture Exchange (TSXV: BLU)	BluEnergies Ltd.
Share Price	C\$ 0.96	Closing price as of Oct 22 2025
Shares Outstanding	64.29 million	Corporate presentation 2025
Fully Diluted Shares	76.35 million	Includes warrants & options
Market Capitalization	C\$ 61.7 million	Based on share price
Warrants	8.00 million @ C\$ 0.75	Average exercise price
Stock Options	4.05 million @ C\$ 0.39	Average exercise price
Insider Ownership	56.5 %	Board, management, major shareholders

08 | Outlook

Key Takeaways

Global Energy Focus

The energy industry is reinvesting in oil and gas, with deep-water exploration driving new discoveries to meet long-term global demand and energy security needs.

Proven Play Type

Cretaceous Deep-Water Fan Systems remain the most successful exploration model worldwide, delivering >50% success rates and fueling a renewed exploration boom across West Africa.

Strategic Position

BluEnergies holds 100% interest in the Offshore Liberia Deep-Water Fan Play, covering ~40% of the Harper Basin—one of the last untapped deep-water frontiers in the Atlantic margin.

Industry Validation & Growth

TotalEnergies' recent acquisition of adjacent blocks (Sept 2025) validates the basin's potential.

Active negotiations of partnerships and advancing technical work continue to position BluEnergies for transformational growth and near-term drilling success.
